

AquaSwizz

Smart water, smarter living

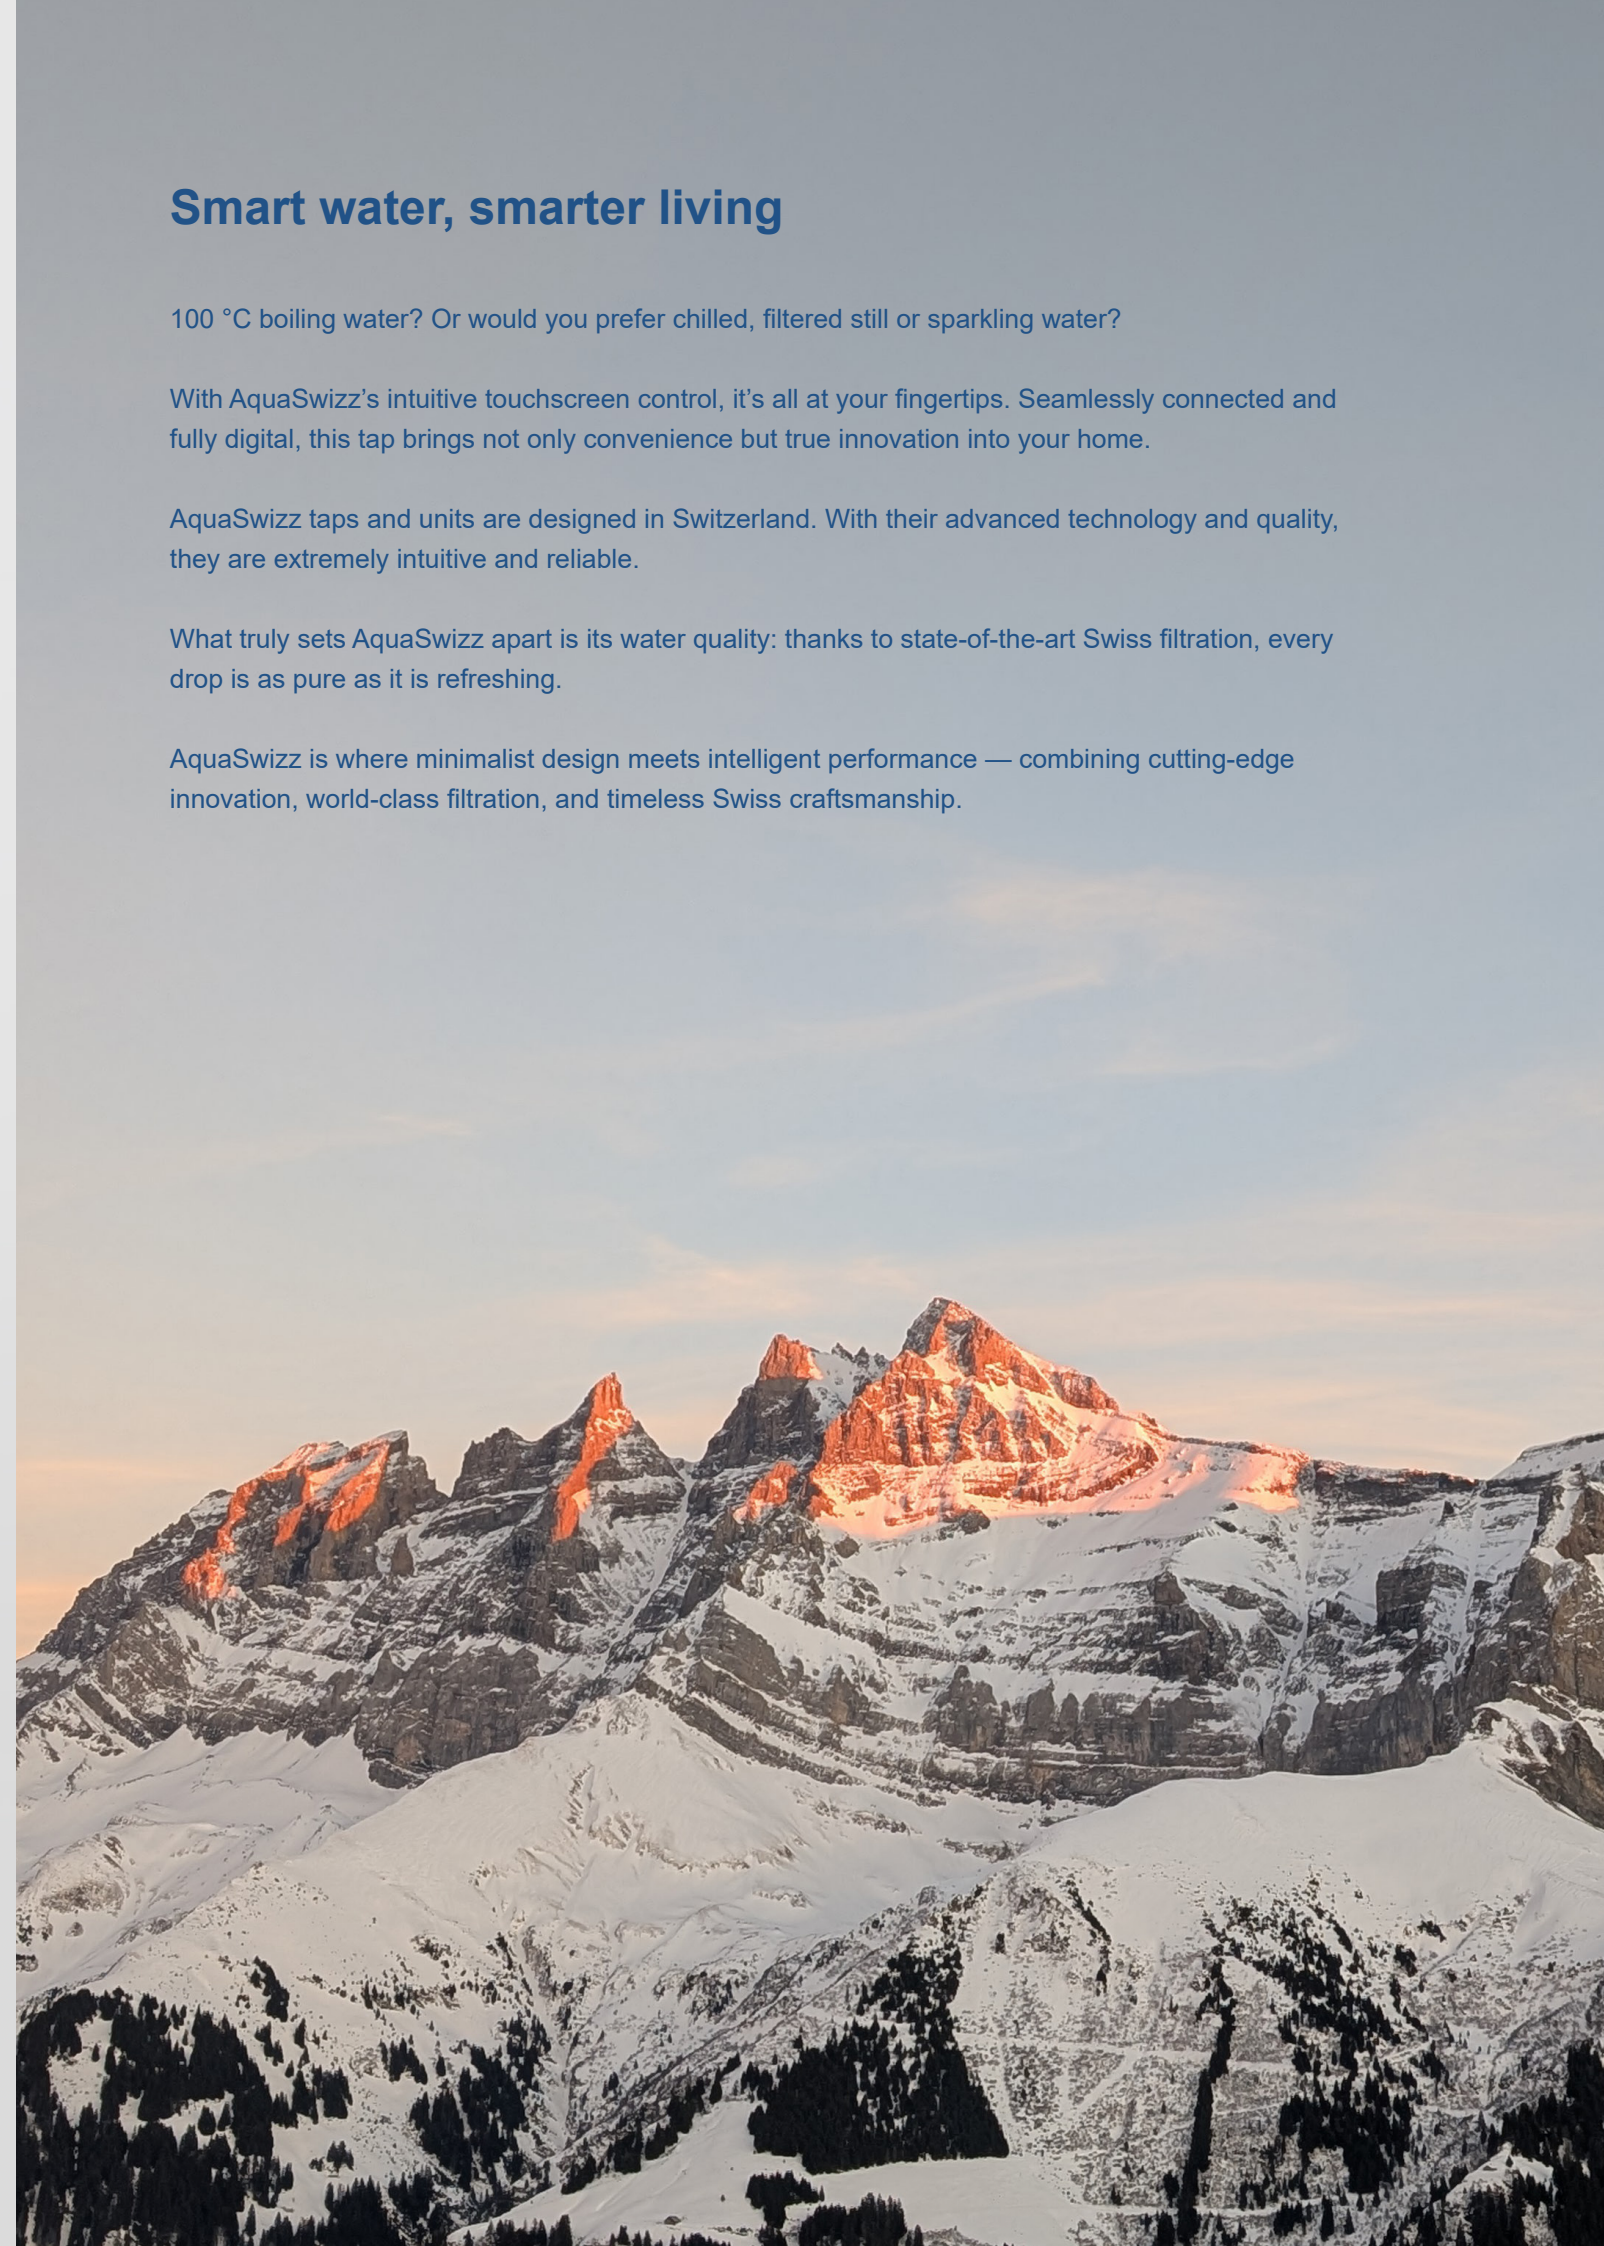

100 °C boiling water? Or would you prefer chilled, filtered still or sparkling water?

With AquaSwizz's intuitive touchscreen control, it's all at your fingertips. Seamlessly connected and fully digital, this tap brings not only convenience but true innovation into your home.

AquaSwizz taps and units are designed in Switzerland. With their advanced technology and quality, they are extremely intuitive and reliable.

What truly sets AquaSwizz apart is its water quality: thanks to state-of-the-art Swiss filtration, every drop is as pure as it is refreshing.

AquaSwizz is where minimalist design meets intelligent performance — combining cutting-edge innovation, world-class filtration, and timeless Swiss craftsmanship.

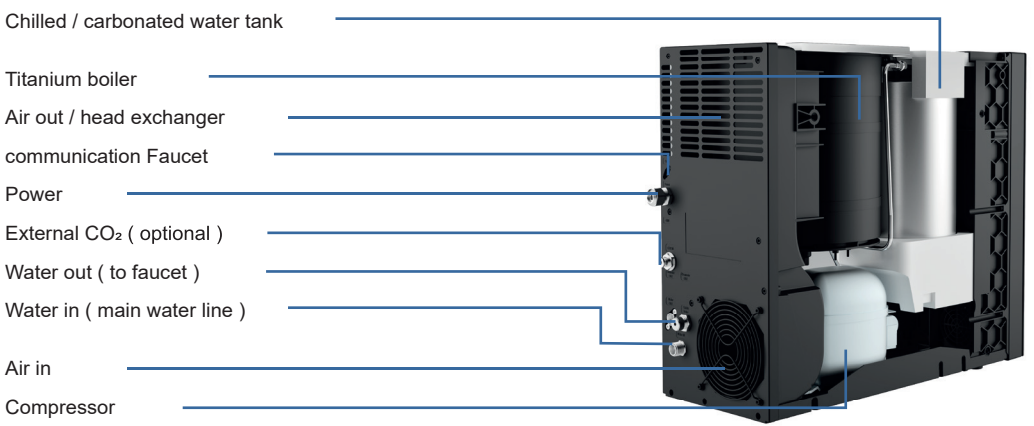

ALL IN ONE - UNIT

At AquaSwizz, pure water isn't left to chance. It's the result of deliberate choices. Like our use of world-class filtration and a high-grade titanium boiler.

Not only do we use the finest filters available to ensure unrivaled water purity, but our titanium boiler, trusted in the medical world for its durability and resistance to corrosion, guarantees long-lasting performance, even under extreme conditions. It's the ideal material for handling boiling water under high pressure and daily use.

Because truly exceptional water starts with exceptional engineering.

The ALL IN ONE - unit:
100 °C boiling water, chilled filtered still and sparkling water.

Meet our titenium boiler

Why titanium?
It's strong, highly resistant to corrosion and, unlike other inferior materials, resists the build-up of calcium limescale. What's more, titanium never passes its properties onto the drinking water as it is a very low-level contamination material. The vessel, element, inlet, outlet and temperature sensor-covers are all made from titanium.

WATER FILTRATION

- Strong device protection combined with maximum output
- Perfect taste thanks to our patented mineralstabilization technology
- Easy replacement without turning off the water supply (auto shut-off function)
- Bypass function with seven settings that uses our patented DuoBlend® technology
- Integrated protection against microbial contamination
- Certified for food contact

FILTER - AquaSwizz

Particle filters

Specially selected filter fleeces hold back dirt and particles, thus providing lasting filter protection even when water quality is poor.

Activated carbon

Thanks to their enormous surface area, our activated carbon components are able to remove undesired substances such as chlorine and organic contaminants and they eliminate unpleasant odors. We select and combine different types of activated carbon to meet each application's specific requirements.

Ion exchangers

Ion exchangers reduce water hardness and thus prevent limescale deposits. Depending on the type of filter used, partial demineralization (decarbonization) can also be achieved. In addition, ion exchangers reduce toxic heavy metals such as lead.

Mineral stabilization

Valuable minerals such as calcium and magnesium are partially retained. Calcium, which forms limescale, is converted into a soluble form by our patented mineral stabilization technology in order to prevent limescale deposits.

Fine and microplastic filters

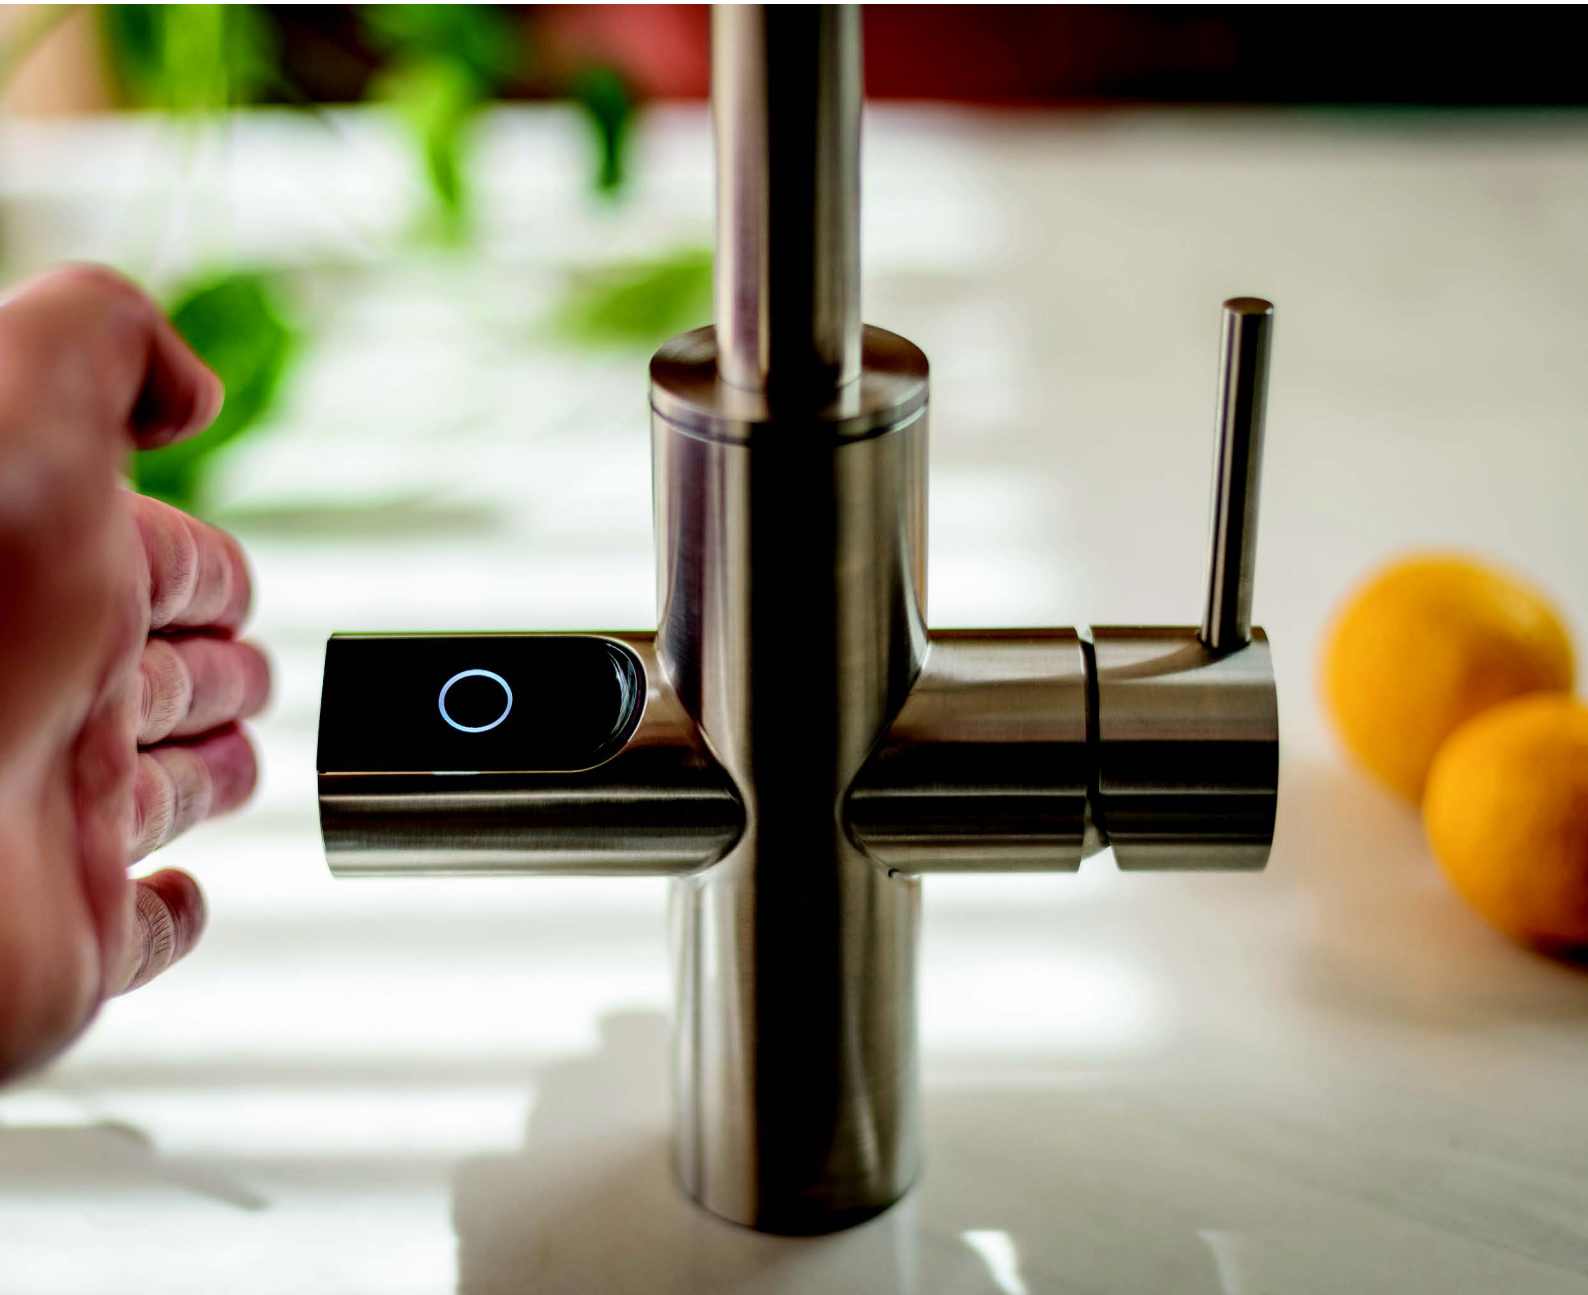

Active carbon block and microfiltration modules efficiently remove even the smallest particles and impurities. At the same time, they form a second line of defense for holding back organic contaminants.

Touchscreen + Touchless sensor

Aquaswizz faucets are unique with their touchscreen and touchless operation. A faucet has never been this smart and at the same time so convenient for getting the desired filtered water into your glass.

Our Hybrid faucet also comes with an intelligent touch-free sensor, letting you wash your hands without ever touching the tap. No more dirt, smudges, or fingerprints. This smart technology makes handwashing effortless and ultra-hygienic. Plus, the faucet automatically stops the water flow after 10 seconds—saving both water and hassle.

Operating the tap with the ALL IN ONE UNIT

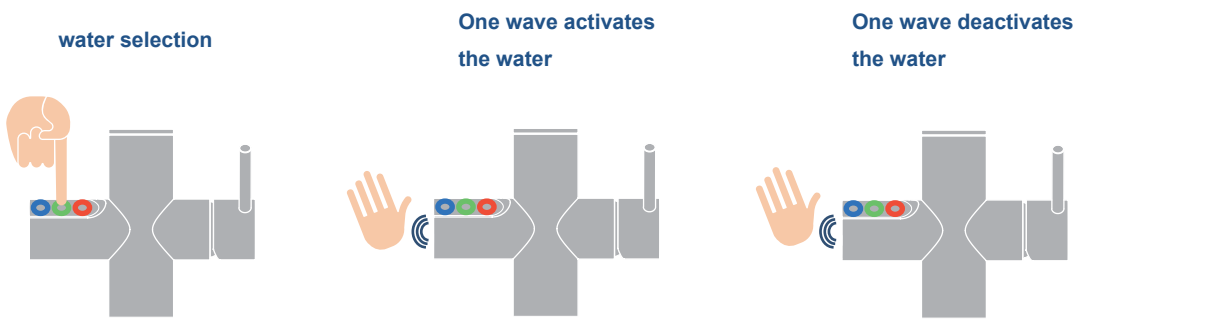

The AquaSwizz tap is easy, smart, and safe to operate using the touch pad and touchless sensor.

touch pad - menu options

-  Chilled filtered water
-  Chillend sparkling water
-  100° boiling water
-  Chilled lightly sparkling water
-  Filtered water

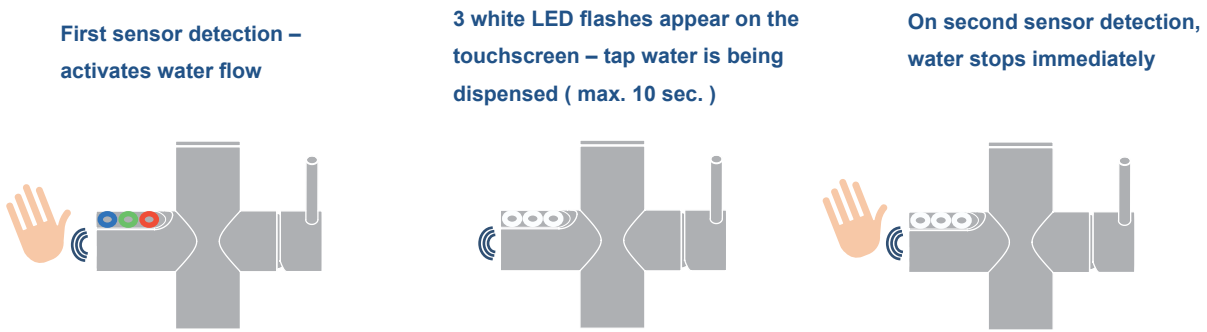

Press a coloured circle on the touch pad to select your desired water type. Then wave your hand past the touchless sensor to the left of the tap to turn the water on or off.

- 1x blue = chilled filtered water
- 1x green = chilled sparkling water
- 2x red = 100°C boiling water
- Or combine two colours for additional functions.

Hybrid function

This feature allows you to operate your kitchen tap touch-free by simply waving your hand past the sensor.

Unique at AquaSwizz

Smooth flow technology

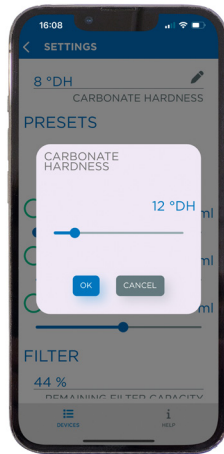

AquaSwizz taps are equipped with a unique flow technique, wich ensures that boiling water never comes out of the tap already sluttering. An extra safety feature we design-in to all of our taps.

Smartphone App

Connect the faucet with our app and personalize it just the way you like.

For example, you can set your own presets for the desired water volume, which can then be easily controlled using the touchscreen. For each water type you can program up to three different volume presets, from filling a single glass to a full jug.

Enjoy water faster and easier than ever before.
